

ABSTRACT OF THE DISCLOSURE

[0076] A double clutch assembly includes a first clutch area with a first pressure plate, which can be moved by a first force-exerting assembly toward an abutment assembly; a second clutch area with a second pressure plate, which can be moved by a second force-exerting assembly toward an abutment assembly; and a connecting assembly for connecting the abutment assembly to a drive element. The connecting assembly includes a connecting plate assembly with a first, radially outer connecting section, which extends over an outer circumferential surface of the abutment assembly and is attached thereto by a plurality of connecting elements.
